

Extra Dryer

Let's shine

Pearlswith high and
rapid absorption capacity

CHARACTERISTICS

EXTRA DRYER is a product with a remarkable absorbing capacity specifically designed for the rapid densification of liquids and sludges (polishing of concrete or stone surfaces); thanks to its size ratio, the product is able to absorb 100/150% of its volume, making it an essential product for the rapid recovery of liquids, facilitating subsequent storage and transport.

EXTRA DRYER, in contact with fluids, forms a semi-dense and homogeneous gel with excellent stability as the absorption mechanism is based on a physical-chemical process of incorporation and expansion of crystalline microspheres.

HOW TO USE

On a flat surface, collect the sludge or sewage due to the processing to be treated as much as possible, then spread a little product, mix lightly and wait a few minutes for the reaction, after that remove the gel and store in a suitable container.

If the liquids are already stowed in buckets or containers with a wide mouth, add a little product and mix for a short time to improve the dispersion of the absorbent beads then wait for the gelling reaction. It is recommended to consider any expansions of the volume after reaction to avoid leaks from the container.

It is advisable to avoid washing the surface for a period of 7 days after the final treatment in order to avoid any unsightly reactions.

INDICATIVE COVERAGE

Not quantifiable.

STORAGE

The product must be stored in the original containers, hermetically closed, protected from direct sunlight and from frost. In these conditions the product has a shelf life of 12 months from the date of the delivery note.

LIMITS OF RESPONSIBILITY

We decline all responsibility for work and damage which might result from improper or incorrect use of the product. The indications supplied with our product specifications and instructions for use are the results of accurate laboratory tests and experience in the field. However, as it is not possible to forward other evidence, when the products are used, these indications shall not be binding and do not imply liability on our part. As well as following good working practices, before applying the product we recommend you read the safety recommendations and the directions on the package.

For the best professional results, it is advised to test a small area first, for compatibility with the surface to treat and the desired effect. This preliminary testing is also useful to determine the consumption according to the characteristics of the material the product will be used for and to the type of processing.
